CARBON MEDIA FILTRATION

Carbon Air Filters remove pollutants from the air with the process known as Adsorption. The key process of AD-sorption allows carbon filters to filter organic chemicals (gases) from the air. Carbon filters can produce a unique odor when they are at capacity which signals time to change your carbon filter to achieve optimum efficiency.

AB-sorption

AD-sorption

OPTIMUM CABIN AIR ODOR CONTROL

Carbon Air Filters are designed to filter gases through a bed of activated carbon media to combat volatile organic compounds (VOC's), odors, gases, and particulates found in cabins of vehicles.

CARBON CAN BE FOUND IN EVERYDAY ITEMS

Plants
